SUMMARY

Strategy and operations leader with 7+ years designing operating systems for go-to-market teams, including four inside a public SaaS company growing 30% at ~\$2B ARR. Sole operations partner to Samsara's US Enterprise Success organization (NYSE: IOT) - roughly 1,700 accounts across two segments, supporting 11 front-line managers and 2 directors as their operations business partner. Own territory and coverage design, capacity modeling, retention and renewal operations, and the data architecture, KPI definitions, data quality, and change governance underneath enterprise CS reporting. Ship production Claude workflows: multi-step agents, shared decision-support tools, and authored skills. Experience spans both sides of the GTM org, in Customer Success and Sales Operations.

EXPERIENCE

Samsara - Connected Operations Platform | ~\$2B ARR (NYSE: IOT)

CS Operations & Strategy Manager | Aug 2025 - Present

Sole operations partner to US Enterprise Success across two segments - roughly 1,700 accounts, 11 front-line managers, 2 directors - absorbing the organization's expansion from a single-director segment into three segments under two directors without added headcount. Designed the operating cadence that made that scope tractable: monthly manager 1:1s by segment, weekly office hours, and a biweekly ops cadence with both directors and all managers.

- **Resolved a production incident in the nightly business-review scheduling engine** after a service-tier change created a data-quality event that re-tiered roughly 500 accounts overnight, pushing ~100 into scope with stale anchor dates that computed as already overdue. Confirmed root cause quantitatively - 88% of the 114 affected accounts matched the re-tiered population - then shipped a windowed-firing gate that **suppressed 73 spurious overdue tasks while allowing 27 legitimate ones through**, verified against production fire-set exports including boundary behavior. Recommended excluding affected accounts from the quarter's coverage-KPI denominator so the metric was not distorted by a data event.
- **Built and deployed a multi-step read-only Claude agent** consolidating five systems into a ~2-minute morning briefing (~2 hrs/week recovered per user), engineered around two failure modes: name disambiguation against sent messages and the directory, and verification that a task is not already complete before surfacing it. Generalized it into a program that generates a purpose-built briefing agent per stakeholder, **now implemented across Customer Success, Implementation Services, and Sales**, alongside a library of three authored skills and a documented model-routing framework matching task class to the least expensive model that performs reliably.
- **Rebuilt the Enterprise account-assignment and book-allocation tool on authoritative HR-system-of-record service-tier data** surfaced through Databricks, replacing inference and correcting three compounding territory-capacity errors: mis-inferred service tier, inactive CSMS inflating available capacity, and new hires with zero accounts invisible to the tool entirely. **Rolled out to 7 front-line managers** as a shared, permissioned Claude project; adopted by Enterprise CS leadership as the standard for new-hire assignment closeout.
- **Designed an AI-native renewal-driver analysis** - an agentic Claude workflow across Salesforce, Databricks, Gainsight, and Glean - running a size-controlled logistic regression on roughly 1,000 Enterprise renewals to isolate the **two activities that stay predictive of renewal after controlling for account size, segment, and tenure**, against a set of commonly assumed drivers that did not survive controls. Reconciled Customer Success's primary renewal metric to the certified Finance/BizOps rate, closing a standing reporting gap, and delivered a director-ready report plus a CS x Renewals operating-model proposal informing FY27 strategy.
- **Traced a silent redefinition of the shared CRM field anchoring every Enterprise business-review trigger** - repointed from the highest-value to the nearest open renewal, deployed roughly 8 months before discovery, with an estimated 15% of accounts affected per the change record. Proposed decoupling the review trigger from the shared field and instituting a dependent-workflows governance checklist for future shared-field changes.
- **Standardized the FY27 Enterprise retention and success KPI set**: 5 primary KPIs anchored to a dollar-weighted renewal-rate definition (renewal ACV / rolling-off ARR, trailing twelve months) owned by BizOps rather than a CS-local definition, with **2 KPIs published as blocked against named blockers rather than estimated**. Shipped per-manager and per-segment quarter-over-quarter computation with numerator and denominator disclosed and low-volume segments flagged as statistically unreliable.
- **Rebranded every customer-facing template at the company** for the July 2026 public brand relaunch, AI-assisted end to end against a fixed launch date. Cross-referenced a **1,922-row generation log** against the rebrand tracker to establish that the assigned row named 4 of 7 live templates in that family, and surfaced roughly **25 further in-use templates absent from the tracker entirely** - including the highest-volume unowned template and localized international variants that would not have

inherited the English rebrand. Re-sized effort **upward by more than half** after auditing template tooling, piloted two decks to validate the revised estimate before committing, and delivered on the public launch date with every dynamic binding intact.

- **Architected Enterprise license-utilization reporting from a schema analysis of the production extract** (3,529 rows, 811 accounts, 14 device types), correcting the join key and the underutilization-flag logic before build rather than after, and reconciling the denominator to the existing account-level source of truth. Separately delivered program reporting split across two dashboards to stay inside the platform's hard widget ceiling.
- **Program-managed the US Enterprise pass of a risk-taxonomy migration audit** - 13 rules assessed keep/pause/hold (8/3/2) against live open-task counts and last-fired dates rather than opinion - establishing two governance positions that carried into the cutover: Ops owns rule decisions, and nothing is paused until its replacement trigger is live.
- **Validated a 765-account re-tiering backfill** an upstream team reported complete, identifying **14 accounts (~2%) still mis-tiered** and delivering a summary-and-detail workbook rather than an assertion.

Senior Sales Operations & Strategy Analyst II | Feb 2024 - Jul 2025

- Drove a 45% lift in employee NPS and a 20% QoQ improvement in Enterprise renewal performance by leading a cross-functional redesign of the Enterprise Customer Success operating model.
- Increased renewal rates 17% by spearheading company-wide value-based selling initiatives through operational playbooks and enablement frameworks.
- Influenced prioritization tied to \$16.8M+ in retained and expansion ARR by establishing a product-feedback and roadmap-escalation framework across Customer Success, Product, and Engineering.
- Re-tiered \$1B+ in ARR and protected \$70M of at-risk child accounts (red/yellow sentiment within two years of renewal) by directing annual operating planning and redesigning the account coverage model - replacing a blunt parent/child service rule with a centralized-vs-decentralized relationship-type model - a territory and capacity redesign that freed capacity on primary managed accounts while shielding independently-run accounts the old rule would have under-served.

Customer Success Operations & Strategy Analyst II | Jun 2022 - Feb 2024

- Cut issue-resolution timelines 50% across 1,500+ Enterprise accounts by developing a scalable customer-health and churn-risk intelligence framework feeding proactive retention motions.
- Automated 250+ executive and customer-facing deliverables by implementing content-generation and reporting systems integrating Salesforce, Tableau, Databricks, and Matik.
- Supported \$65M+ in renewal ARR and lifted executive participation 20% by managing an Executive Trek initiative connecting C-suite sponsors with strategic Enterprise customers.
- Selected for Matik's Product Advisory Council after implementation feedback drove three shipped platform features.

Chisholm, Chisholm & Kilpatrick LTD - Providence, RI

Growth & Development Strategy Analyst; Development Team Lead | Dec 2018 - Jun 2022

- Built financial models, forecasting, and SQL/Tableau reporting infrastructure that informed firm-wide strategic planning and executive decision-making.
- Managed and mentored a team of junior analysts, and shaped staffing strategy and specialized client-service team design.

SKILLS

AI & Automation: Claude (artifacts, agents, Skills), MCP connector integration, multi-user AI tool deployment, LLM workflow design, prompt engineering, model selection and cost governance, AI operations

Data & Systems: Salesforce, Gainsight (admin and architecture), Databricks, SQL, Tableau, Matik, Workday-sourced org data, Python, pandas, Excel

Strategy & Operations: GTM strategy, revenue operations, customer success operations, annual planning, forecasting, segmentation, territory and coverage design, capacity modeling, retention and renewal operations, KPI definition and governance, data quality and governance, program management, change management and migration governance, executive reporting, cross-functional program leadership, business partnering

EDUCATION

University of Massachusetts Boston, Honors College | 2014 - 2018
