SUMMARY

GTM strategy and operations leader with 7+ years building the operating systems go-to-market teams run on, most recently as the sole operations partner to Samsara's US Enterprise Success organization (~1,700 accounts, 11 managers, 2 directors) at a public company reporting ~\$2B ARR growing 30%. Builds AI-native systems and scales them from a single team to org-wide programs: **ten production Claude systems** spanning multi-step agents, live decision workbenches, a statistical renewal study, and the governance program that now oversees AI tooling across every CS segment and Services. Owns ambiguous, cross-functional problems end to end and turns one-off heroics into repeatable process.

EXPERIENCE

Samsara Connected Operations Platform

NYSE: IOT · ~\$2B ARR

CS Operations & Strategy Manager

Aug 2025 – Present

Sole operations partner to US Enterprise Success: **~1,700 accounts across two segments, 11 front-line managers, and 2 directors**. Own territory and coverage design, capacity modeling, renewal and retention operations, KPI definitions, and the data architecture underneath Enterprise CS reporting, and run the operating cadence across both directors and every manager.

AI PROGRAMS AND PRODUCTION SYSTEMS

- **Co-lead CS's AI Intake & Adoption program** across every CS segment and Services: authored the charter, a risk-tiered governance framework that requires every shared tool to reconcile to Salesforce or Gainsight before promotion, an AI asset inventory, a single intake path, and a three-layer measurement model separating usage, workflow adoption, and validated business value. Discovery surfaced three workflows that two or three people had each built independently; tracking toward 90%+ of intake dispositioned within SLA and validated before/after value cases for each flagship tool.
- **Built a renewal review workbench on live Salesforce and Gainsight data** that leadership adopted to replace the spreadsheet review, then scaled it to Frontiers (Canada, EMEA, Mexico), Public Sector, Scale, and Renewals sales leadership (~6,200 open renewals), putting CSM and renewal-AE views of each renewal on one surface for the first time. Rollout is tracking toward **100% of renewal reviews in the tool and 85% of \$250K+ renewals reviewed 90+ days before close**, measured against late-identified risk on reviewed vs. unreviewed renewals.
- **Rebuilt Enterprise account assignment as a published AI workbench** running on each user's own connectors: ranks candidate CSMs on sales-pod alignment, independent account and ARR capacity caps, a six-dimension complexity score, and region, and runs integrity queues that catch ownership drift across Gainsight, Salesforce, and Workday before tasks misfire. **132 moves across 8 teams**, extended to Mid-Market in under a week; tracking toward **100% of Enterprise and Mid-Market moves staged in the tool at a median 3-day cycle time**.
- **Built the CS engine for the FY28 annual account carve** jointly with RevOps and Sales Planning: scenario modeling, rule-based auto-balancing of whole customer families, and renewal and pipeline locks across ~2,300 Enterprise accounts and 8 territories. Surfaced two structural conflicts months before sign-off: ARR caps that turned book balancing into a headcount decision for Finance, and a sales-pod rule that could not coexist with the disruption cap. Targeting signed-off books **30+ days earlier than the prior cycle**, every book inside caps or under a signed exception.
- **Built an Enterprise KPI command center** that gives every manager one dated snapshot of six KPIs across ~2,300 accounts, with drill-down to the accounts behind each number, replacing dashboards that returned different answers for the same KPI. Exposed that task-closure reporting overstated true business-review coverage, and caught two calculation errors in validation. Tracking toward all six KPI targets, including **more than doubling risk-plan coverage on high-risk accounts**.
- **Built a read-only briefing agent, then a generator that builds one per stakeholder**, live across Customer Success, Implementation Services, and Sales: five systems in a ~2-minute morning read (~2 hrs/week per user, est.), with name disambiguation and a check that a task is not already done.
- **Ran an AI-native renewal-driver study**, an agentic Claude workflow across Salesforce, Databricks, Gainsight, and Glean: a size-controlled logistic regression on ~1,000 renewals isolated the 2 of ~8 assumed drivers that stay predictive after controls. Reconciled CS's primary renewal metric to the certified Finance rate and delivered a CS x Renewals operating-model proposal that informed FY27 strategy.

LAUNCHES, INCIDENTS, AND GOVERNANCE

- **Owned execution of the July 2026 public brand relaunch** across every customer-facing template at the company against a fixed launch date. Audited a 1,922-row generation log to prove the assigned scope covered 4 of 7 live templates and to surface ~25 untracked in-use templates; re-sized the estimate up by half, piloted to validate it, and shipped on launch day

with every dynamic binding intact.

- **Resolved a production incident** in the nightly business-review engine after a tier change re-tiered ~500 accounts overnight. Confirmed root cause quantitatively (88% match), shipped a windowed-firing gate that suppressed 73 spurious tasks and fired 27 legitimate ones, and verified it against production exports at the boundary.
- **Traced a silent upstream redefinition** of the CRM field anchoring every Enterprise business-review trigger and proposed decoupling it, plus a dependent-workflows checklist for future shared-field changes.
- **Standardized the FY27 Enterprise KPI set** on a BizOps-owned, dollar-weighted renewal-rate definition with numerators and denominators disclosed and two KPIs published as blocked rather than estimated. Audited a 13-rule risk-taxonomy migration and a 765-account re-tiering backfill (14 still wrong).

Senior Sales Operations & Strategy Analyst II

Feb 2024 – Jul 2025

- **Re-tiered \$1B+ in ARR and protected \$70M in at-risk child accounts** by directing annual operating planning and redesigning the coverage model, replacing a blunt parent/child rule with a centralized-vs-decentralized relationship model.
- Led a cross-functional redesign of the Enterprise CS operating model, contributing to a **45% lift in employee NPS** and a **20% QoQ improvement** in Enterprise renewal performance.
- Built the executive operating systems **10+ senior leaders** used to run renewal forecasting, customer risk intelligence, executive engagement tracking, and pipeline visibility across the Enterprise book.
- Built a product-feedback and roadmap-escalation loop across CS, Product, and Engineering that influenced prioritization tied to **\$16.8M+** in retained and expansion ARR.
- Lifted renewal rates **17%** by leading company-wide value-based selling through operational playbooks and enablement.
- Designed automated churn-risk workflows turning sentiment, executive stakeholder changes, and NPS into proactive escalations, and built go-to-green programs for at-risk accounts that raised stakeholder engagement **14%**.
- Designed onboarding and enablement for new analysts, shortening ramp time across the broader operations team.

Customer Success Operations & Strategy Analyst II

Jun 2022 – Feb 2024

- Cut issue-resolution time **50%** across **1,500+ Enterprise accounts** with a customer-health and churn-risk intelligence framework that fed proactive retention motions.
- Automated **250+** executive and customer-facing deliverables by implementing content-generation and reporting systems across Salesforce, Tableau, Databricks, and Matik.
- Selected for **Matik's Product Advisory Council** after my implementation feedback drove three shipped platform features.
- Supported **\$65M+** in renewal ARR and lifted executive participation **20%** by running an executive sponsorship program pairing C-suite sponsors with strategic Enterprise customers.
- Built enterprise-wide KPI and operational-intelligence dashboards that improved data trust and cut support overhead **30%**.
- Partnered with leaders across **12 departments** to redesign Enterprise Success and risk-management workflows, contributing to a **15%** improvement in retention outcomes.

Chisholm, Chisholm & Kilpatrick LTD

Providence, RI

Growth & Development Strategy Analyst

Aug 2019 – Jun 2022

- Built financial models, forecasting systems, and operational dashboards supporting firm-wide strategic planning.
- Used SQL and Tableau to build the executive reporting infrastructure behind the firm's growth strategy.
- Led workflow-optimization and employee-development initiatives that improved efficiency and cross-team collaboration.

Development Team Lead

Dec 2018 – Aug 2019

- Managed and mentored junior analysts, owning workflow execution and quality control for the Veterans Law practice.
- Used case-management data to shape staffing strategy and stand up specialized client-service teams, and built the onboarding program and training materials that shortened new-hire ramp.

SKILLS

AI systems: Claude (agents, artifacts, Skills, Projects), MCP integration, in-artifact Anthropic API, per-user connector deployment, AI governance and adoption measurement, model selection and cost governance, prompt engineering

Data and code: SQL, Python (pandas, statsmodels), JavaScript/React, Databricks, Salesforce, Gainsight (admin and architecture), Tableau, Matik, Workday data

Strategy and ops: GTM strategy, launch and program management, territory and coverage design, capacity modeling, annual planning, KPI governance, executive reporting, change and migration governance

EDUCATION

University of Massachusetts Boston, Honors College

2014 – 2018

B.A. Economics, Magna Cum Laude · B.A. Philosophy, Magna Cum Laude
Google Data Analytics Professional Certificate
